WIQUEST NAMES TWO ADDITIONS TO EXECUTIVE TEAM

Key Wireless Industry Veterans Expand Company UWB Market Leadership

ALLEN, Texas (July 11, 2005) – WiQuest Communications, Inc., a fabless semiconductor company focused on the design and production of complete high-performance, ultrawideband-based wireless silicon solutions, today announced the appointment of two new members to the company's executive management team. Todd Brown joins WiQuest as vice president of sales from SyChip Inc., where he served in the same capacity. Bill Carney, formerly with Texas Instruments' WLAN Business Unit, becomes WiQuest's senior director of market development. These two wireless industry leaders join WiQuest at an important point in the company's growth and progression, as well as that of the broader ultrawideband (UWB) market.

Brown has a distinguished career in the semiconductor and electronics systems business, including wireless and RF technology. As product manager for piezoelectric components at Murata Electronics, he led their marketing and product engineering efforts. Brown moved on to AMP Corporation, where he grew territory sales over 1600% in just a few years. After serving at RF Monolithics as a successful business unit manager for their low power wireless products, he joined Alpha Industries, where he was sales director for Europe, including strategic accounts. Following the Conexant / Alpha merger to form Skyworks, he was largely responsible for integrating the combined sales organization along with building out their global distribution network. Most recently, Brown was instrumental in leading the sales and customer design-in process, along with driving significant revenue growth at SyChip. Brown holds a bachelor of science degree in electrical engineering from Southern Polytechnic University, and has attended the MIT/Sloan School of Business Executive Program.

Carney brings complementary strengths to WiQuest. He most recently served as senior director of market and business development for the Texas Instrument (TI) Residential Gateway and Embedded Systems Business (formerly Alantro Communications). TI acquired Alantro in September 2000, where Carney served as vice president of sales and marketing. Previously, he was senior director of worldwide marketing at Synopsys, Inc., a leader in EDA tools. Prior to his role at Synopsys, he spent 14 years with

LSI Logic Corporation in a variety of management positions. Carney began his successful career at Intel Corporation.

Carney is a regular contributor to trade publications, speaks frequently at wireless industry events and conferences, and is a noted authority on the business and technical issues relating to the Wi-Fi and wireless communications industry. After serving two years as TI's board member of the Wi-Fi Alliance, (the WLAN industry trade association), he was elected as the Wi-Fi Alliance board chairman in both 2004 and 2005. Carney earned his bachelor's degree in electrical engineering from California Polytechnic State University, San Luis Obispo, and pursued executive business studies at the University of Southern California in Los Angeles.

"I'm excited to welcome Todd and Bill to WiQuest," stated Dr. Matthew Shoemake, founder, CEO, and president. "Todd brings WiQuest many close and important industry relationships.. His familiarity and experience with our target customers will help us achieve our objectives as well as provide these companies with access to our leading-edge, advanced UWB solutions," continued Shoemake. "Bill brings to us his unquestionable experience and leadership in guiding the Wi-Fi industry towards the phenomenal growth it has seen. His industry relationships, strategic skills and wireless technical knowledge will be a vital asset to both WiQuest and the broader UWB marketplace."

Founded in September 2003, WiQuest continues to build on its strong team comprised of semiconductor and system design veterans from companies including Alantro Communications, Nokia, Qualcomm, IBM, Bay Networks, Toshiba, Sun Microsystems, Texas Instruments, and others. The background of this organization includes hundreds of years of collective industry semiconductor and system experience, resulting in dozens of successful high volume product implementations, from Ethernet switches to DSL chipsets and wireless LAN solutions. WiQuest employees are well recognized not only from their industry backgrounds, but also from their visibility and leadership in standards and regulatory work, including the IEEE, the Wi-Fi Alliance and WiMedia.

About WiQuest Communications

WiQuest Communications, Inc. is a privately-held fabless semiconductor company that designs, develops and supplies complete ultrawideband solutions to PC, consumer electronics, and mobile systems companies worldwide. The company builds products that focus on leading-edge, high-speed wireless communications using standards-based multiband OFDM ultrawideband technology. WiQuest is headquartered at 601 Century Parkway, Suite 110, Allen, Texas 75013. The phone is (214) 547-1600 and fax is (214) 547-1606. For more information, visit the website at www.WiQuest.com.
